INFORMATION FOR AUTHORS

Developmental Review, an international and interdisciplinary journal, publishes original articles that bear on conceptual issues in psychological development. Appropriate papers include (1) theoretical statement, (2) reviews of literature, (3) summaries of programmatic research, (4) empirical findings that are provocative and of particular relevance for developmental theory, (5) integrated collections of papers on a single theme, (6) analyses of social policy as it affects human development, (7) historical analyses, (8) essays on major books, and (9) analyses of method and design. Discussions and commentaries are welcomed. Subject matter may be from the disciplines of psychology, sociology, education, or pediatrics, may be basic or applied, and may be drawn from any species or age range as long as it speaks to issues of psychological development.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Developmental Review* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if the manuscript is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscripts fitting the objectives of *Developmental Review* will ordinarily be submitted to at least two reviewers for comments. Authors are invited to suggest potential reviewers with the understanding that present or former students or collaborators should not be suggested and that these recommendations are subject to the Editor's discretion. Authors wishing blind review should specifically request it and should remove identifying material from the abstract and the body of the manuscript. Persons interested in organizing a thematic collection of papers, submitting a book review, or preparing a commentary on previously published material are invited to make a preliminary inquiry to the Editor.

Manuscripts should be submitted in triplicate to: **Grover J. Whitehurst, Ph.D.,** *Developmental Review,* **Department of Psychology, State University of New York, Stony Brook, New York 11794.**

A fourth copy should be retained by the author. Manuscripts must be double-spaced throughout. Reproduced copies of the manuscripts will be accepted only if they are of high quality. Each manuscript must include a concise abstract, preferably not exceeding 100 to 120 words, which will appear after the title and author's name in the published article. In most papers this abstract will obviate the need for a summary. Authors are requested to follow the specifications of the *Publication Manual of the American Psychological Association* (3rd ed., 1983) and *Guidelines for Nonsexist Language in APA Journals* in preparing their manuscripts.

Figures and Tables. Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photographic reproduction. A convenient size for drawings is 8½ × 11 inches (21 × 27.5 cm). Drawings should be made with Indian ink on tracing linen, smooth surface white paper, or bristol board. Graph paper, if used, should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Sharp, clear glossy prints of figures are acceptable. Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Literature references in the text should be cited by author's surname and the year of publication, e.g., Smith (1980); Smith et al. (1981); Smith and Jones (1982, p. 250) (for references to a specific page); (Smith & Jones, 1983) (ampersand for references in parentheses). If a reference has more than two authors, the citation includes the surnames of all authors at the first mention, but later citations of the same reference include only the surname of the first author and the abbreviation "et al." Suffixes a, b, etc., should be used following the date to distinguish two or more works by the same author(s) in the same year, e.g., (Smith (1984a, 1984b). Literature citations in the bibliography should be arranged alphabetically according to the surname of the author.

Journal titles should be written out in full according to the form followed in the *Psychological Abstracts*.

The desired style of capitalization and punctuation in references is apparent in the following examples:

Morrison, F. J. (1984). Reading disability: A problem in rule learning and work decoding. *Developmental Review*, **4**, 36–47.

Trieman, R., & Baron, J. (1981). Segmental analysis ability: Development and relation to reading ability. In G. Waller & T. MacKinnon (Eds.), *Reading research: Advances in theory and practice* (Vol. 3, pp. 159–198). New York: Academic Press.

Cohen, J. (1977). *Statistical power analysis for the behavioral sciences*. New York: Academic Press.

Proofs and Reprints. Proofs will be sent to the authors with reprint order forms. Authors will be charged for alterations in excess of 10% of the cost of original composition. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered on the form provided.

JOURNAL OF MATHEMATICAL PSYCHOLOGY

EDITOR
Thomas S. Wallsten
The University of North Carolina at Chapel Hill

The **Journal of Mathematical Psychology** is concerned with empirical research directly relevant to theoretical questions within psychology and presents research articles, monographs and reviews, notes and comments, and book reviews in all areas of mathematical and theoretical psychology. The journal emphasizes the development or experimental testing of psychological process models. Work in fundamental measurement also falls within this journal's area of interest.

Research Areas Include

- Artificial intelligence and computer simulation (e.g., computational vision as applied to human vision) of psychological processes
- Fundamental measurement or scaling
- Human factors and human-computer interaction
- Learning and memory
- Motivational dynamics
- Neural networks and neural modeling
- Neuropsychological theories
- Perception and/or psychophysics
- Problem solving
- Psycholinguistics
- Psychometric research that bears on the explication of psychological concepts or process models

Consciousness and Cognition

An International Journal

Editors

Bernard J. Baars
The Wright Institute, Berkeley, California

William P. Banks
Pomona College and the Graduate School Claremont, California

Consciousness and Cognition: An International Journal provides a forum for a natural-science approach to the issues of *conscious experience, voluntary control,* and *self.* The journal will feature two types of articles: empirical research (in the form of regular articles and short reports) and theoretical articles. Book reviews, integrative theoretical and critical literature reviews, and tutorial reviews will also be published. The journal aims to be both scientifically rigorous and open to novel contributions.

Topics of interest include the following:

- Implicit memory
- Selective and directed attention
- Priming, subliminal or otherwise
- Neuroelectric correlates of awareness and decision-making
- Assessment of awareness; protocol analysis
- The properties of automaticity in perception and action
- Relations between awareness and attention
- Models of the thalamocortical complex
- Blindsight
- The neuropathology of conscious experience and voluntary control
- Pathology of self and self-awareness
- The development of the self concept in children

ISSN 1053-8100
For further information, contact the Publisher.

Manuscript Submission Information
The Editors welcome submissions from cognitive scientists and neuroscientists; social, developmental, and personality researchers; linguists; philosophers of science; and any others committed to a scientific understanding of the journal's three main issues. Please submit manuscripts to:
